## Airport Noise Management System Monthly Report Report Descriptions

### Background

Installed in 1996, the Airport Noise Management System (ANMS) enables the City of Chicago to monitor the amount of noise being generated over the communities surrounding O'Hare by the aircraft operating at the Airport. The ANMS collects, analyzes and processes data from a number of sources of information including a network of 30 noise monitors around O'Hare, FAA radar data, weather data and calls to the noise hotline. Over 120,000 flights and 400,000 noise events are recorded by the ANMS each month for the Chicago Airport System. The City of Chicago and the O'Hare Noise Compatibility Commission utilize data from the ANMS to facilitate the development and management of noise abatement programs at the Airport. The following reports summarize pertinent monthly information from that data concerning the noise levels and operations at the Airport.

### Runway Use Report

O'Hare has seven runways that are all utilized at different times depending primarily upon the prevailing wind conditions on the airfield, as well as any runway maintenance. Aircraft performance requirements make it necessary for aircraft to depart and land into the wind for safety purposes.

The Runway Use Report presents the average percentage of use for each runway for the current month, the previous month and a 12-month average. The percentage of use for departures and arrivals is shown graphically for each runway. This data is for all hours of the day and for all aircraft types. Also shown is the runway use for the nighttime hours (10 p.m. to 7 a.m.).

Highlights for **May 2008** include:

#### Departures

Most used departure runway: **32L - 37%**  
32L departures increased by **9%** from April 2008  
22L departures decreased by **9%** from April 2008

#### Arrivals

Most used arrival runway: **10 - 24%**  
4R arrivals increased by **5%** from April 2008  
22R arrivals decreased by **3%** from April 2008

### Aircraft Noise Report

The Aircraft Noise Report summarizes noise measurements from each of the 30 noise monitors located around the Airport. The data presented summarizes the Day-Night Average Noise Levels (DNL's). DNL is a 24-hour time-averaged sound exposure level with a 10 decibel (dB) nighttime (10 p.m. to 7 a.m.) weighting to account for the lower background noise levels during the nighttime hours.

The data displays the measured aircraft DNL for each month and its comparison to the same month of the previous year, and it compares the current month to the 12-month average. The aircraft noise report identifies noise from the existing aircraft operations at O'Hare. The modeled values for each monitor are shown for 1997, 2000 and the OMP Full Build Out Noise Contours.

The aircraft noise levels for each monitor vary from month to month. This is primarily due to runways being utilized differently under changing wind conditions which effect where the aircraft fly.

**Aircraft Fleet Mix Report**

The Aircraft Fleet Mix Report summarizes the number and type of aircraft operating at O'Hare International Airport during both all hours of the day and during the nighttime hours.

In 1990, Congress enacted legislation to eliminate all Stage 2 aircraft operating in the continental United States by the year 2000. In response, the FAA created a program to "phase-out" the older, louder Stage 2 aircraft over a ten-year period to achieve full compliance by the 2000 deadline. As of January 2000, all aircraft operating at O'Hare and within the United States were Stage 3. Stage 3 aircraft, such as the Boeing 757 (B757) and new Boeing 737's (B737) use a quieter type of engine that significantly reduces noise at the source. Also, a Stage 3 aircraft can be a previous Stage 2 aircraft with the engines retrofitted with a "Hush-kit" such as a Boeing 727 (B72Q), Boeing 737-200 (B73Q) and DC-9 (DC9Q). More than **98%** of the operations at O'Hare International Airport are originally certified as Stage 3 aircraft.

**Noise Hotline Report**

The Department of Aviation maintains a toll-free noise hotline (**1-800-435-9569**) for citizens to express their concern about particular incidents or aircraft noise levels in general. The noise hotline report summarizes the number of calls received and where the callers were located. The tabular report lists the number of calls by community as well as the number of individual callers. The graph at the bottom of the page illustrates the nature of the complaint calls during the specified month.

Also shown are complaint calls by month displaying seasonal trends. The chart at the bottom of this page illustrates the trend in monthly complaint calls. Complaint totals for 2006 include all calls made to the O'Hare Noise Hotline. Complaint totals for 2007 and beyond only include calls made within the State of Illinois to the O'Hare Noise Hotline.

<b>Complaint Calls by Month</b>			
<b>Month</b>	<b>2006</b>	<b>2007</b>	<b>2008</b>
January	62	66	31
